Purpose of Inspection:

Inspected the site while in the area to document changes that have taken place since my last inspection on October 27, 2005.

Inspection Summary:

The footprint of the quarries appears to be relatively unchanged since my last inspection. Mining in the Autumn Red Quarry has established a ~30' highwall. The ultimate plan in this area will remove the hill that pit has been established in. The result of the hill removal will be that no highwall will be left when mining is completed.

To the south the Peaches & Cream/Lilac Quarry appear to be deeper but the footprint has not increased. Further south Purple Quarry appears to be relatively unchanged except that the shot material that was located in the pit a year ago has been removed. The footprint of the Peanut Brittle Quarrrys (North & South) appears to have changed a little since my last visit.

All the quarries within this permit were GPS'd recently by Ed Ginouves of the BLM, so I did not duplicate his effort. A copy of his GPS information is included with this report. No photos were taken during this inspection tour.

Conclusions and Recommendations:

I will continue to monitor this site when I am in the area.
